

# Address

**Delivery Address**

Street Address

Address Line 2

City

State/Region/Province

Postal / Zip Code

Country

The **Address** field captures comprehensive address information with distinct elements, creating a structured and standardized approach to collecting location data.

- **Address Elements:**

**Street Address:** The specific street or building information.

**Address Line 2:** Additional address details, such as suite or apartment number.

**City:** The city or locality.

**State/Region/Province:** The state, region, or province.

**Postal/Zip Code:** The postal or zip code for the area.

**Country:** The country of residence.

- You can set individual address elements to be mandatory for the user to fill in by clicking the  icon corresponding to an element. For instance, you might make the Street Address, City, and Country mandatory to ensure essential address components are provided.
- You can choose to hide the labels associated with address elements to achieve a cleaner and more streamlined appearance in the form.

Show Elements Label

- **Auto-fill Address From:** This option enhances user convenience by suggesting and auto-filling address fields based on input. Choose one of the three elements (Street Address, Address Line 2, or Postal/Zip Code) to enable this feature. As a user begins typing in the selected field in the live form, a list of suggested addresses appears. When a user selects a suggestion from the list, the other address fields are automatically filled in with the corresponding details.
- **Input Method: State/Region/Province:** For the "State/Region/Province" element in an address field, you can choose the input method, allowing users to enter this information manually or automating it through a dynamically generated list of states based on the selected country.

- **Allowed Countries:** Tailor the available country options in the dropdown menu to display only the relevant countries for your audience or the specific context of your form.
- **Default Country:** You can set a **default country** to streamline the form-filling process. This can be achieved by selecting a country from the list or by automatically determining the country based on the respondent's IP location.
- **Placeholder Text:** Provide a placeholder text for each address element in a form to enhance user guidance and set expectations for respondents. Placeholder text serves as a temporary example or hint within the form fields.
- **Input Text Case:** You have the flexibility to control the visual presentation of the entered text, aligning it with the intended formatting standards for your form.
