

Creating AI Forms

Zoho Forms provides an AI-powered form builder to make the process of form creation intuitive, fast, and efficient. By simply describing your form in plain language, the AI generates a form tailored to your needs.

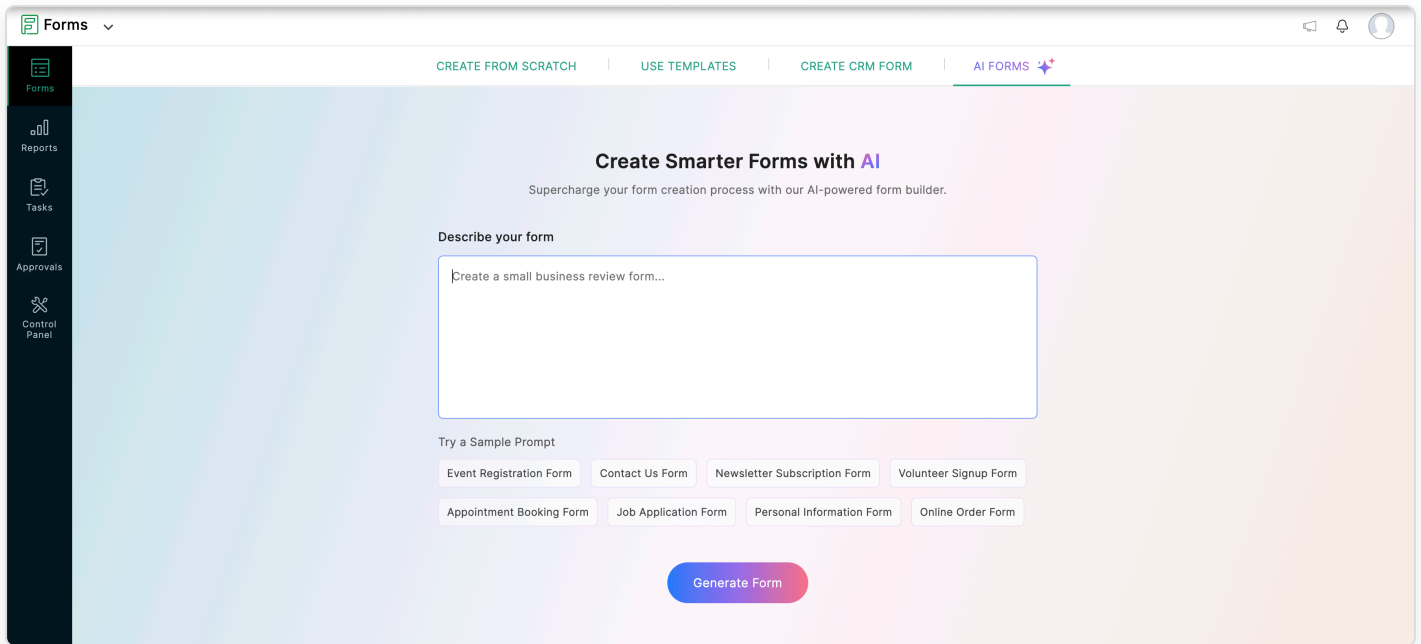

Advantages of using AI for form creation

- Eliminate the need to manually add each field since AI predicts and adds relevant fields based on the description.
- No technical expertise is required. Simply describe your requirements.
- Offers flexibility to modify the AI-generated form to suit specific needs.
- Supports a wide variety of use cases, such as registrations, orders, and more.

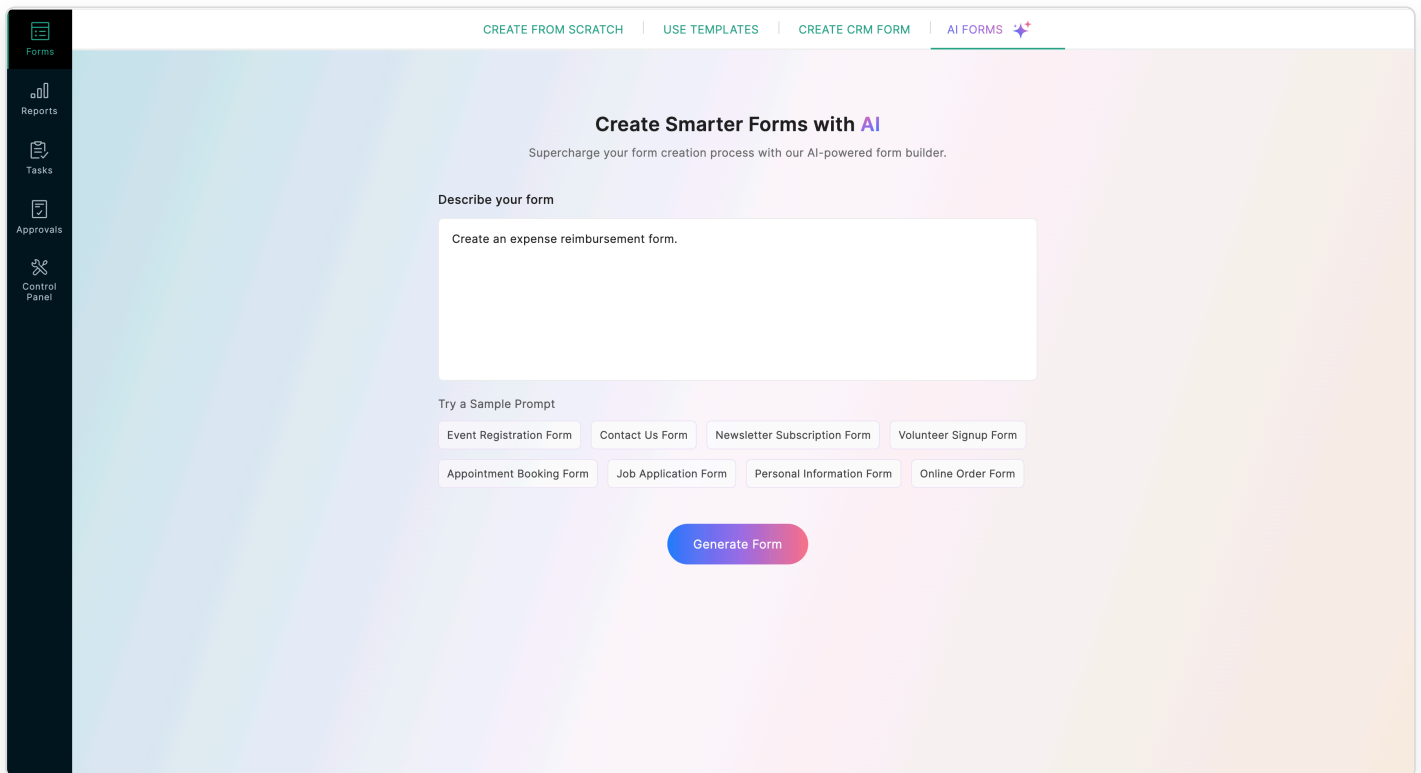

Building a form using AI

To build an AI form,

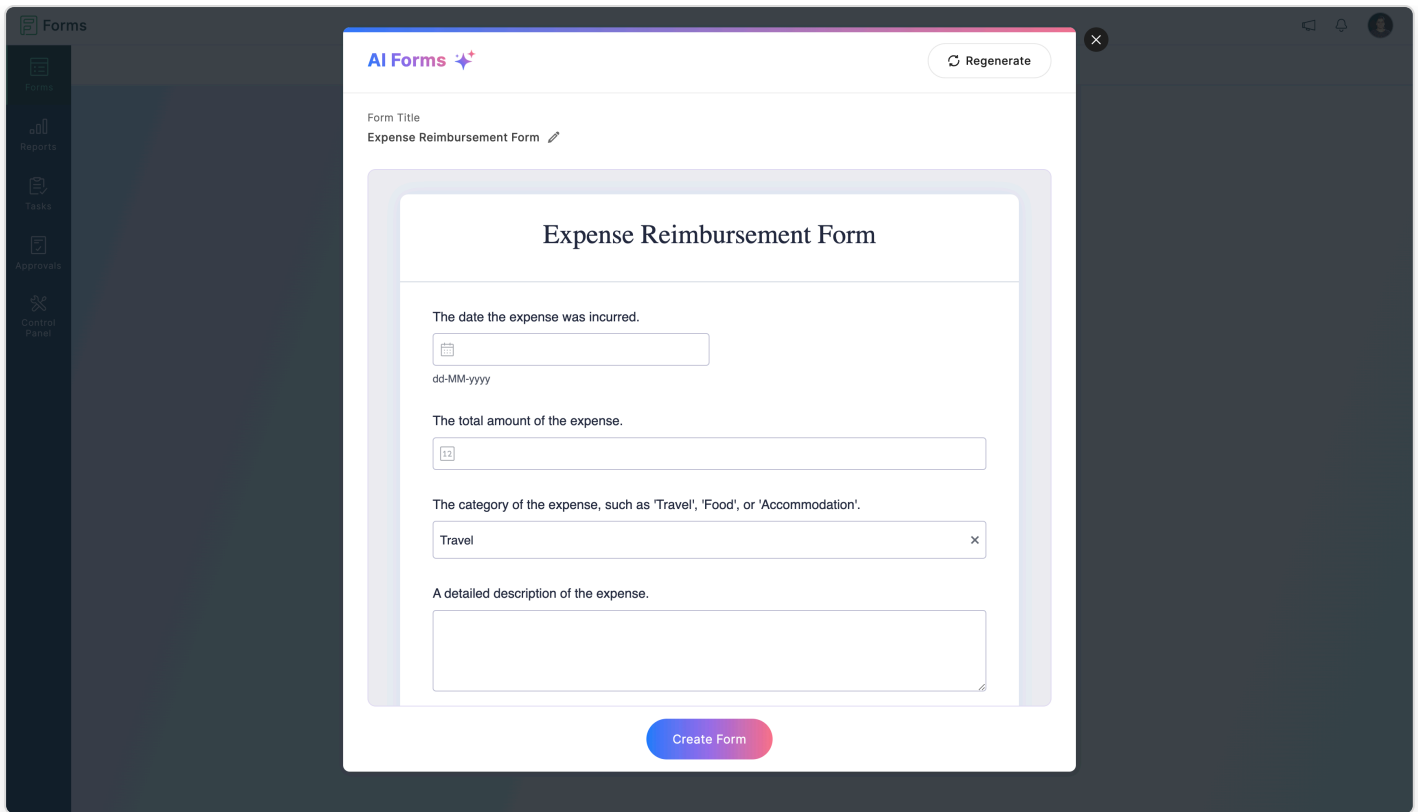

1. In your Zoho Forms account, under the Forms tab, click to create a new form and choose **AI Forms**.

2. In the **Describe your form** textbox, provide a description of your form. For example, *Create an event registration form.*

3. Click **Generate Form**. The AI will use your input to automatically generate form fields and structure.
4. A preview of the generated form along with its form title will pop up. You can edit the form title as required by clicking the edit icon beside the form title as shown.

5. Click **Create Form** which will land you on the form builder where you can:

- Add new fields by dragging and dropping the fields and edit the field properties.
- Customize the look and feel of the form using the [Themes](#) tab.
- Set up [conditional rules](#) to tailor the form based on respondent input.
