

Form Types - Overview

In Zoho Forms, there are 2 types of forms

- [Standard Forms](#): Standard Forms are the traditional type of forms that you're likely familiar with. They follow a linear structure, where questions are presented one after the other.
- [Card Forms](#): Card forms take a more interactive and visually appealing approach to form design. Instead of a linear flow, questions are presented one at a time, which respondents can navigate at their own pace.

Both Standard Forms and Card Forms have their strengths, and the choice between them depends on your specific use case and the user experience you want to create. Zoho Forms provides a flexible platform that allows you to design and deploy forms that best suit your needs.
