

Number

Enter the number of Shirts

6

The Number field is a form field to collect numerical data from respondents.

In the **Properties** of the field,

- You can provide placeholder text, offering a brief hint or example to guide respondents on the expected input.
- You can define the number of digits allowed in the entered numerical value. Range : 0 - 18 digits
- You can constrain responses to a defined numerical range by setting minimum and maximum values. Respondents can only input values that fall within the specified minimum and maximum limits. For example, in the context of an Age field, you can set the minimum age to 18 and the maximum age to 65.
- You can use responses from other fields to dynamically influence the minimum and maximum values the respondent can enter in the Number field.
- You can provide a Unit to a number field to enhance clarity and context for respondents. For example, include unit such as *meters* or *kilometers* for a field capturing distance.

Validation

- **Mandatory:** Ensure that respondents cannot submit the form without entering the data in this field.
- **No Duplicates:** Prevent the submission of identical entries.
- **Allow Negative Value:** Allow respondents to input numeric values that fall below zero.
- **Include number input confirmation:** Selecting this option prompts the respondents to re-enter the numbers for confirmation, ensuring that both inputs match, thus preventing typos.
