The **Radio** field allows users to select one option from a list. In a **Radio** field, when a user selects one option, it automatically deselects any other options within the same field. It comes with several properties to customize the list of choices and enhance the user experience:

- **Field Type:** You can change the Radio field type to Dropdown field type in the properties.
- **Show data in:** Customize the layout or style of the **Radio** field to display the choices in 1/2/3 columns or side by side.
- **Placeholder Text:** Provide a placeholder text for each name element in a form to enhance user guidance and set expectations for respondents. Placeholder text serves as a temporary example or hint within the form fields.
- Add a list of choices as needed, providing users with a selection to pick from. Name the choices as you wish, tailoring them to better suit the context of your form.
- **Import options:** You can insert a list of pre-defined standard list of options or manually add the choices in the field.
- **Assign Values:** You can assign values (Numeric, Text, Email) to each choice. These assigned values can be used to perform calculations.
[Check out](#) how you can use the values assigned to choices in Formulas, Email Notifications, Thank You Page, and Integrations.
- **Sort Choices:** You can sort the choices alphabetically in ascending or descending order, with the option to enable or disable Case Sensitive sorting. [Learn More](#)

Validation

- **Mandatory:** Ensure that respondents cannot submit the form without selecting a choice in the Radio field
